Allowing Access
1
Expiry of Password.

1] Distinguish b/w System SW

1] System Software → acts as an interface between the hardware and the user. [OS, word,]

2] Application Software → @ Programs designed to help user perform specific tasks [word excel]

2] methods used by an IT to collect data.

- Questionnaire ✓

- Observation ✓

- meetings ✓

- Interviews ✓

3] A Critical factors considered before selecting purchasing Software

- Skill Level ✓

- Budget ✓

- Durability ✓

- Cost ✓

4] Advts of developing Bc

Advts of purchasing off the shelf Software

Lower Costs → off the shelf is usually cheaper than

developing Bc. because, the development cost is shared among users.

Ready for immediate use → already developed and tested

So it can be installed and used quickly.

Draw of purchasing of the shelf Software

1] May not meet all user requirements → designed for general use, so some features needed by specific organization may be missing.

2] Limited Customization: may not modify the users exact needs.

• Suppliers ~~benefit~~

5] Parameters that can be modified when configuring or managing a local user are

- Changing the account name ✓
- Setting or Changing the login password.
- Updating the account image ✓
- Changing where user files are stored.

6] Technical differences b/w.

- 1] Administrator → has full control over the system.
- 2] Standard user → limited access for normal users.
- 3] Guest user → limited access with limited permissions

7] Step by step that should be followed.

a] Identify user requirements ✓

- Analyze current system. ✓
- Research available software. ✓
- Compare software options ✓
- Select best software ✓
- Test software ✓
- Train users. ✓
- Implement the system. ✓

b] Two acquisition methods

off the shelf → when a firm wants a cheaper or quick solution ✓

Bespoke → when the firm has unique requirements not met by existing software.

8] Appropriate local user role types

1] Senior IT administrator → administrator role → has full control over the system, settings, software installation and user management.

2) Permanent Permissions → Standard user etc → On
Admin daily tasks but cannot change system settings
Visiting Clients → Guest etc → very limited etc access
Temporary restriction.

6) Security risks.

Unauthorized access → visitors may access sensitive files.
Malware risks → one compromised file can spread through system.

Access the system
Data loss → users may accidentally delete or modify.

Important system files

System misconfig → all may install unauthorized software.
or change settings affecting performance.
