

LEARNING PLAN
COMPUTER SOFTWARE Level 5

Institution Name	ABERDARE TECHNICAL COLLEGE
Unit Name	INSTALL COMPUTER SOFTWARE
Unit code	0619 451 06A
Name of the trainer	MR NDIRANGU
Competence level	LEVEL 5 MODULE 3
Number learners	3
Skill or Job task: Install computer software, test computer software functionality and perform software maintenance.	
Benchmark Criteria used:	

1. Install Computer software

- 1.1 Computer software identified as per user need.
- 1.2 Computer software selected as per workplace procedure.
- 1.3 Local user accounts are created as per the workplace procedures
- 1.4 Data Backup performed as per work procedure.
- 1.5 Computer Software is installed as per software installation manual.
- 1.6 Computer Software is configured as per software installation manual.

2. Test computer software functionality.

- 2.1 Software testing is performed as per user manual.
- 2.2 Corrective measures are performed as per user requirements.
- 2.3 Computer software functionality is confirmed as per workplace procedures

3. Perform software maintenance.

- 3.1 Software maintenance schedule is adopted as per workplace procedure.
- 3.2 Software functionality is monitored as per workplace procedure.
- 3.3 Software upgrade is conducted as per installation guide.
- 3.4 Software update is conducted as per the workplace procedures.
- 3.5 Safety procedures are observed as per workplace procedures

LEARNING PLAN
COMPUTER SOFTWARE Level 5

Week	Session Title	Learning Outcomes (Bloom's Taxonomy)	Trainer Activities (Active Learning)	Trainee Activities (Active Learning)	Resources & Assessments
1	Install computer software	Define computer software and classify software types based on function and license.	Use a mind map to illustrate the relationship between System and Application software.	Card Sort: Categorize various software titles into System, Application, or Utility groups.	Projector, Whiteboard, Software flashcards. Assessment: Oral Quiz.
2	Install computer software	Define user needs and analyze hardware compatibility for software selection.	Present a "Case Study" of an old computer and ask what modern software it can support.	Hardware Audit: Check lab PC specs (RAM, CPU, Disk) and verify if they meet specific software requirements.	PC Spec sheets, Software manuals. Assessment: Compatibility Report.
3	Install computer software	Define local user accounts and configure account security settings.	Demonstrate the creation of Standard vs. Administrator accounts in the Control Panel.	Role Setup: Create a Guest account and restrict it from installing new programs.	Lab PCs (Windows/Linux). Assessment: Practical Account Setup.
4	Install computer software	Define installation media and execute	Guided demonstration of installing software	Live Install: Install an office suite or utility and perform the activation/registration process.	Bootable USBs, Software ISOs.

Week	Session Title	Learning Outcomes (Bloom's Taxonomy)	Trainer Activities (Active Learning)	Trainee Activities (Active Learning)	Resources & Assessments
		the software installation process.	from an ISO file and a bootable USB.		Assessment: Installation Checklist.
5	Test computer software functionality	Define software testing and compare manual vs. automated testing tools.	"Live Demo" of Postman for API testing and Selenium for browser automation.	Tool Exploration: Navigate the interface of a testing tool and identify its main features.	Postman, Selenium, Internet access. Assessment: Comparison Table.
6	Test computer software functionality	Define functional testing and perform black-box testing procedures.	Show how to create a "Test Case" with expected vs. actual results.	Functional Run: Execute a set of test cases on a local login form to check for errors.	Demo Software, Test Case templates. Assessment: Test Case Log.
7	Test computer software functionality	Define corrective measures and implement software patches to resolve bugs.	Model the process of downloading and applying a software update/patch.	Troubleshooting: Identify a "bug" in a software setting and apply the correct configuration fix.	Patches, Configuration tools. Assessment: Bug Fix Report.
8	Perform computer	Define software maintenance and	Lecture on the 4 types of maintenance	Scheduling: Create a digital calendar outlining monthly	Maintenance Templates, Excel/Google Calendar.

	software maintenance	design a preventive maintenance schedule.	(Preventive, Corrective, Adaptive, Perfective).	software updates for a 20-PC lab.	Assessment: Maintenance Schedule.
9	Perform computer software maintenance	Define event logs and monitor software health using diagnostic tools.	Walkthrough of Windows Event Viewer to identify "Error" and "Warning" logs.	Log Hunter: Search for specific Error logs in the OS and research the solution online.	OS Diagnostic tools, Error Database. Assessment: Diagnostic Lab.
10	Perform computer software maintenance	Define software upgrades and evaluate system stability while using PPE.	Safety Drill: Demonstrate the proper use of dust coats and gloves during system maintenance.	Final Practical: Perform a version upgrade on a driver while adhering to all OSH/Safety procedures.	PPE (Dust coats, Gloves), Driver updates. Assessment: Final Practical Exam.
